Health Clinics

Pulmonary Rehabilitation Program

QUT’s Exercise Physiology and Nutrition and Dietetics clinics join forces to offer a pulmonary rehabilitation program for patients who have been diagnosed with Chronic Obstructive Pulmonary Disease (COPD).

The program consists of 10 one-hour individualised and supervised weekly exercise rehabilitation sessions including group education. All sessions are supervised by accredited clinical and academic staff with the involvement of fourth year exercise physiology and nutrition and dietetics students at QUT on work integrated learning.

Patients will undergo an assessment with exercise physiology before and after the 10 week exercise and education sessions, and will be provided with a home exercise program. Education sessions include topics such as breathing techniques, information on lung conditions and nutrition and healthy eating. Nutrition and dietetics individual consultations are also available. Results will be communicated to the patient, general practitioner (GP) and referrer.

Portable oxygen cylinders are available on site for those with oxygen prescriptions, and patients are welcome to continue in the service for maintenance exercise for as long as clinically necessary.

When referred by a GP on a GP Management Plan, the patient will incur no out-of-pocket expenses for the number of items indicated for each health professional. Assessments are $40 per session or $30 concession. Exercise rehabilitation sessions are $80 for 10 one-hour sessions when paid in advance, or pay as you go for $10 per session.
